JSON

Javascript Object Notation

JSON is a data-interchange format.

Easy for humans and machines to read/parse, and write/generate.

It is language independent

```
{
    "Name": "Test",
    "Mobile": 12345678,
    "Pets": ["Dog", "cat"],
    "Address": {
        "Permanent address": "USA",
        "current Address": "AU"
    }
}
```

```
{
    "Name": "Test",
    "Mobile": 12345678,
    "Pets": ["Dog", "cat"],
    "Address": {
        "Permanent address": "USA",
        "current Address": "AU"
    }
}
```

```
{
    "Name": "Test",
    "Mobile": 12345678,
    "Pets": ["Dog", "cat"],
    "Address": {
        "Permanent address": "USA",
        "current Address": "AU"
    }
}
```

```json
{
    "Name": "Test",
    "Mobile": 12345678,
    "Pets": ["Dog", "cat"],
    "Address": {
        "Permanent address": "USA",
        "current Address": "AU"
    }
}
```

Let's look at where we get JSON data from
